

Class 3 Spring Term 2016

Our main topic for this term is Rainforests, in which the children will locate rainforests across the world, learn about some of the plants and animals that live there and consider issues such as deforestation. This will also link with our Science objectives in which we will be investigating the requirements of plants for life and growth, the lifecycle of flowering plants and how water is transported.

In Computing the children will be developing their understanding of communication and how to stay safe when using technology.

Additionally, in the first half term the children will be exploring and creating sculptures for their Art work. In the second half term we will be starting a new Design and Technology project by exploring and using mechanisms to make moving rainforest animals.

We will be swimming for the first half term and then moving on to dance in the second part.

The children will also take part in Rising Stars on a Monday morning and will be taught Music by Mrs Crockford.
