

Class 3 Curriculum Letter

Spring Term 2017

Over the next term, our topic will be Natural Disasters. The children will learn about the different natural disasters that can happen across the world, why these happen and the effect and devastation they can cause. We will also look into weather patterns and famous historical natural disasters.

For our Design Technology project, we will be exploring different structures and their strength, leading to children creating their own structures that could withstand a natural disaster. Then, in Art lessons, the children will be exploring shape through aerial views and using this to create their own simplified landscape.

Our Science topic for the first half term is Materials, where we are going to be investigating, exploring and comparing different materials, their properties and uses. For the second part of the term, we will be investigating and identifying different rocks and fossils, including their formation.

Furthermore, in our Computing lessons, children will be developing their understanding of using the internet for research, which will aid their understanding of our topic.

Additionally, the children will have Rising Stars on a Monday morning, but will need their P.E. kit in school for the entire week. The children will be swimming for the first half term on Wednesday afternoons and then moving on to dance in the second part. Mrs Banks will also continue teach them for Religious Education.
